

Brainspotting

Phase I

Online

What is Brainspotting?

Brainspotting is a powerful, focused treatment method that works by identifying, processing and releasing core neurophysiological sources of emotional/body pain, trauma, dissociation and a variety of challenging symptoms. Brainspotting is a simultaneous form of diagnosis and treatment, enhanced with BioLateral sound, which is deep, direct, powerful yet focused and containing.

Seminar Objectives

Through lecture, live demonstration and small group practice participants will learn to do the following:

- Define the components of Brainspotting
- Utilize the techniques of "Inside window", "Outside window" and "Gazespotting"
- Define how Brainspotting can be applied to Trauma, Dissociation, Sports psychology, Somatic conditions
- Demonstrate the theories and practices of Brainspotting
