

Brainspotting

Phase II

Online

What is Brainspotting?

Brainspotting is a brain-based therapy based on the hypothesis that specific eye positions designated as "brainspots" activate and access specific areas of the midbrain that allow for the reprocessing and releasing of core neurophysiological reactions to trauma-related and other psychological experiences.

In addition, Brainspotting is built on a model that emphasizes therapist-client attunement in the healing process. As an open and integrative model, Brainspotting is adaptable to many different areas of specialization and can be integrated with other treatment models.

Brainspotting Phase 2 Seminar Objectives

Through lecture, live demonstration and small group practice participants will learn to do the following:

Participants of this *intermediate level course* will be able to:

- Summarize the research on client-therapist attunement in in-person and online psychotherapy sessions.
- Set and utilize the dual attunement frame.
- Explain the way in which bilateral auditory stimulation may enhance processing during Brainspotting.
